RESEARCH INTERESTS

Cross-device computing

With the growing prevalence of multiple personal computing devices, cross-device computing has garnered significant attention. However, existing techniques often face challenges related to platform dependency. My research has addressed this issue by leveraging the meta-platform characteristics in web applications [c5, c7].

On-device machine learning

As mobile applications increasingly utilize deep neural network (DNN) models, efficient and accurate execution of these models on mobile devices becomes crucial. My research has specifically focused on super-resolution techniques for mobile 360-degree video streaming [c6] and real-time gaze tracking on mobile devices [c3].

Energy-aware mobile systems

Reducing energy consumption has consistently been a crucial concern for mobile devices. I have participated in research on energy optimization for native [c1], web [c2], and game applications [j1] on smartphones. Additionally, I am interested in energy-aware on-device machine learning and machine learning-based energy optimization strategies.
