RESEARCH INTERESTS

On-device and embedded artificial intelligence

As mobile applications increasingly employ deep neural networks (DNNs), efficient and accurate execution on resource-constrained devices such as embedded devices and mobile devices has become critical. My research focuses on enabling such efficiency across various DNN tasks, including vision foundation models [c8, c12], super-resolution for 360-degree videos [c6, c11], and real-time gaze tracking [c3].

Energy-aware mobile systems

Reducing energy consumption has consistently been a crucial concern for mobile devices. I have researched energy optimization for native [c1], web [c2, c9], and game applications [j1] on smartphones. I am also interested in energy-efficient on-device AI techniques [j2, c11] and AI-based energy optimization strategies [c2, c9].

Mobile immersive computing

Immersive videos, such as omnidirectional and volumetric videos, can provide interactive and engaging experiences on mobile devices, but their large data sizes and computational demands pose significant technical challenges. I have explored techniques to maximize video quality under time and resource constraints, such as super-resolution for live 360-degree videos [c6, c11] and 3DGS-based volumetric video streaming [c10].

Cross-device computing

As users increasingly interact with multiple personal devices, cross-device computing has garnered interest. However, prior approaches often suffer from platform dependency. My research explores platform-agnostic methods for I/O sharing and interface distribution by leveraging the meta-platform characteristics of the web. I have analyzed user experience on the mobile web [c4] and proposed cross-device web computing techniques [c5, c7].

EXPERIENCES

Postdoctoral Associate

Oct. 2025 – Present

Virginia Tech, VA, USA

Supervisors:

- Prof. Lingjia Liu (Department of Electrical and Computer Engineering)
- Prof. Bo Ji (Department of Computer Science)

EDUCATION

Ph.D. in Computer Science

Mar. 2018 – Aug. 2025

Yonsei University, Seoul, Republic of Korea

- Advisor: Prof. Hojung Cha (Mobile Embedded Systems Lab.)
- Thesis: Providing Resource-Optimized User Experiences in Networked Mobile Systems

B.S in Computer Science and Engineering

Mar. 2014 – Feb. 2018

Yonsei University, Seoul, Republic of Korea
